

SKID-STEER FORESTRY MULCHER

SHOW YOUR TEETH.

THERE'S NOTHING BETTER.

*At Diamond Mowers, we build the best. Period. And we do it all in the USA. No wonder our heavy-duty equipment is the toughest, safest, and most reliable in the business. Demand Better. **DEMAND DIAMOND.***

READY TO WORK

You can't wait to get our 60" Forestry Mulcher into the field, so it comes already equipped with hoses and half-inch couplers. It can effectively mulch trees with diameters of up to 6" in seconds. Even trees over 14" don't stand a chance.

SHIELDS UP. OR DOWN. YOUR CALL.

Diamond's Forestry Mulcher comes with a fully adjustable deflector shield with three different positions. When shield is down, it's less likely to throw material and easier to control where the exhaust is distributed. As you raise the shield, the head becomes more productive and able to process the material more quickly. It's your debris. Put it wherever you want.

SKID-STEER FORESTRY MULCHER

TEETH THAT WILL MAKE YOU SMILE.

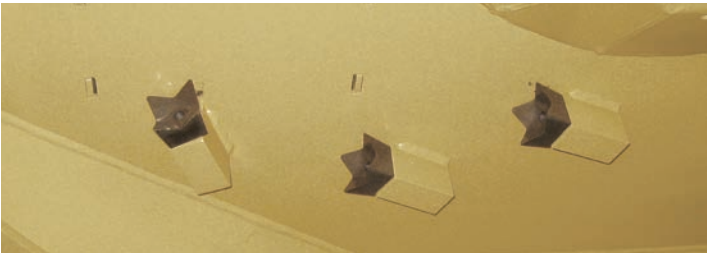

Diamond's Forestry Mulchers utilize just one style of tooth for simple care and maintenance. Tooth holders are precision-located by machined holes for balance, and easy location for tooth replacement.

Each tooth can be easily sharpened for more efficient cutting and higher production. You can even extend the lifespan and improve operational costs by rotating teeth.

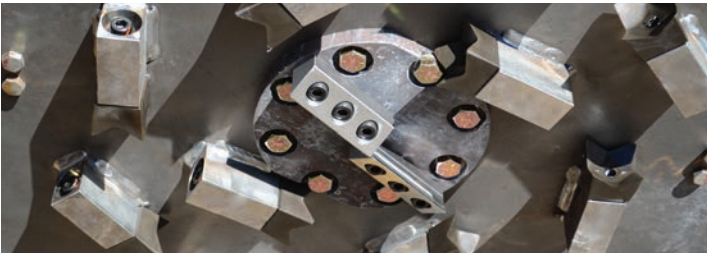

THE DIAMOND SPINDLE

Our proven Diamond Spindle comes with a replaceable splined insert. Unlike most competitors' heads—which are permanently affixed to the spindle—Diamond's spindle features 8 bolts that make disc removal easy, and servicing hassle-free.

BIG JOBS GO DOWN EASY

Fixed teeth on the inside of the unit shell mulch material as the dish carries it through. And our patented planer knives in the center of the dish ensure that the entire dish can be used to mulch, eliminating the dead zone found on comparable equipment.

The Diamond Skid-Steer Forestry Mulcher comes with two different chutes. The Narrow Intake Chute is designed for taller trees without many lower branches. This chute includes a hook to help feed the trees and a ramp to scoop material already on the ground into the head.

Narrow Intake Chute

Wide Intake Chute

The Wide Intake Chute is designed with an open throat to feed larger, bushier trees more efficiently.

BEAT THE DRUM

When you compare the two, Diamond's Forestry Mulcher will beat a drum style head every time.

	DRUM STYLE HEAD	DIAMOND SKID-STEER FORESTRY MULCHER
DEBRIS	Throws debris back at machine.	Throws material away from machine – Safer for operators. Easier on the gear.
MATERIAL SIZE	Produces sawdust chips that clog filters and coolers.	Produces material approximately 2" in diameter – Quick decomposition. No clogging.
HORSEPOWER	Limited to hydraulic horsepower of the machine.	Disc design creates more power using inertia built up in the disc – Quickly gather and process trees.
GROUND LEVEL	Stops at ground level, leaving a stump.	Disc style allows you to cut below ground level – Try that with a drum.

DIAMOND SKID-STEER FORESTRY MULCHER SPECS:

Product	Material	Head Weight	Operating Requirements
60" Skid-Steer Forestry Mulcher	Cuts up to 14" material Mulches up to 6" material	2,240 lbs.	32 - 45 GPM
