PRODUCT INFORMATION

Record the model and serial number of your unit here. When calling for warranty, service, or parts, you may be asked to provide this information, in order to ensure fast, accurate service.

MODEL: Rotary Mower

SIZE: 60"(1524mm) 72"(1829mm) 84"(2134mm)
(circle one)

SERIAL NUMBER: _____

Any failure to read, understand and follow the instructions found in this operator's manual could lead to serious injury. Operators who choose to operate this equipment without following instructions, or who choose to operate this equipment in a manner inconsistent with the recommendations set forth in this manual, do so at their own risk and assume the risk of injury. Diamond Mowers will not be liable for an owner or operator's loss, damage, or injury due to the misuse of the equipment, failure to understand the inherent risks, or inability to properly operate the equipment.

WELCOME!

Thank you for choosing Diamond Mowers, and welcome to your Skid-Steer / Compact Track Loader Rotary Mower. Before you begin operating, we encourage you to look through this manual to review the proper maintenance and operating techniques that will keep you, and your equipment, safe – while ensuring you the most productive Rotary Mower in the market.

We have nothing but respect and admiration for you. Our job at Diamond is to provide you with the toughest, most reliable and safest equipment that will allow you to do your job better. That also means being there when you need us.

CONTACT US:

Parts: 888.960.0361 | parts@diamondmowers.com

Warranty / Service: 888.960.0364 | warranty@diamondmowers.com

Main Office: 800.658.5561 | 605.977.3300

Website: www.diamondmowers.com | **Email:** info@diamondmowers.com

Your time is important to us.

We guarantee that Genuine Diamond Parts will ship within 72-hours of the order being placed or the parts and shipping are free.

Your satisfaction is guaranteed.

If you are not completely satisfied with your new Diamond in the first 30-days, we will buy it back. No questions asked.

Thanks again for choosing Diamond.

If at any time your needs are not being met by our team, please feel free to call me direct.

OWNER REGISTRATION

In your welcome packet you should have received a warranty registration form. Complete and return this form to our main office.

If you'd rather complete this info online, go to:
<http://info.diamondmowers.com/register-my-product>

Returning your registration information to Diamond will help us process any warranty claims quickly and efficiently - so you can get back to work, fast.

TRANSFERRED OWNERSHIP

If you have acquired this rotary mower from a previous owner, we encourage you to register your equipment online. By registering your Diamond Mowers unit, you'll stay informed on product advancements, offers and service alerts.

Register by going to: <http://info.diamondmowers.com/register-my-product>

We honor our equipment's warranty from the date it was put into service, no matter who's in charge of running it.

For any questions, contact our Warranty / Service team at:
888.960.0364 or 605.977.3300
warranty@diamondmowers.com

INTENDED USE

This attachment is designed to be used for mowing and brush management applications.

This includes:

- Cutting grass.
- Mulching brush.
- Cutting 4" (102mm) material continuously and 10" (254mm) material intermittently.

This attachment should only be used in an area free of obstructions and bystanders. Any use on non-vegetative material, or in an area that is not clear of persons and property, is strictly prohibited. Any use outside of the aforementioned application is considered contrary to its intended use. Any damage that may occur as a result of misuse will void warranty as stated in Diamond Mowers' warranty policy.

NOTICE

Do not operate this unit without first reading the safety precautions and operating instructions in this manual.

TAKE A LOOK AROUND

Let's get started by doing a quick walk around of the Rotary Mower.

BLADES

Three, hardened steel knives $\frac{5}{8}$ " (16mm) thick. The blades are built to swing, allowing them to break away when in contact with rocks.

PUSH BAR

Guides material away from the loader.

TRI-HEX DISC

It is important to build momentum in the cutting disc and allow for recovery time. This disc acts like a flywheel and stores energy. It will take some time for the disc to come up to full speed. If the disc begins to slow down in heavy brush or while cutting large trees, slow your movements to allow the disc to return to full speed.

HOSES

Shipped with $\frac{1}{2}$ " QD couplers and a case drain line with both male and female ends. High flow motors are equipped with a case drain line while standard flow motors are not. If your mower is equipped with a case drain line, ensure that it is properly connected and unrestricted to tank.

GETTING STARTED

MACHINE FLOW

Diamond's Skid-Steer / Compact Track Loader Rotary Mowers can be used on either a low flow or high flow machine capable of 16-46 GPM (61-175 LPM). Make certain the Rotary Mower you purchased is sized right for your skid-steer / compact track loader.

DECK SIZE	GPM	LPM	CASE DRAIN
60" (1524mm) Deck	16-28	61-106	No
	29-46	110-174	Yes
72" (1829mm) Deck	17-28	65-106	No
	29-41	110-155	Yes
84" (2134mm) Deck	32-41	122-152	Yes

SHATTER RESISTANT ENCLOSURE

A shatter resistant enclosure is **REQUIRED!** This product must not be used without a shatter resistant cab enclosure. Debris can fly back at the cab and cause injury.

QUICK ATTACH

The Rotary Mower will mount onto the front of the skid-steer / compact track loader quick attach plate in place of a bucket or other implements.

CONTINUED ON NEXT PAGE

QD COUPLERS

The case drain line must be properly connected or you will damage your hydraulic motor. The case drain line will come equipped with both male and female QD couplers.

- Install the QD coupler(s) that matches the skid-steer / compact track loader.
- Attachment is shipped with 1/2" flat face connectors, which are a common size for most skid-steer / compact track loaders.
- Clean connections before attaching to prevent contamination.
- Make sure the hose length outside of the bracket is long enough for the head to make a full range of motion, but not so long that the hose can pinch.
 - An additional hose bracket location  is provided. If you need to move your hoses, unbolt the hoses and hose bracket from the current position and secure them to the alternate position.
- Start machine at low idle and verify that the disc is spinning in a clockwise direction as viewed from the operator's position.
 - If the pressure and return hoses are reversed, the disc will spin counter-clockwise resulting in damage.
 - If this reversal occurs, either inverse the flow from your machine, or switch the QD couplers on the pressure and return hoses.

OPERATING YOUR ROTARY MOWER

Before you operate, note that the primary responsibility for safety on this equipment falls to the operator. Only trained individuals who have read and understood this manual should operate this unit.

If any portion of this manual is not understood, contact Diamond Mowers' Service/Warranty at 888.960.0364 or 605.977.3300.

SAFETY TIPS

Be sure to read all warnings carefully. They are included for your safety, and for the safety of others working with you.

NOTICE

Indicates a property damage hazard *ONLY*, no *PERSONAL* injury.

CAUTION

Indicates where *MINOR* injury *COULD* result if instructions are not followed.

WARNING

Indicates where *SERIOUS* injury or death *COULD* result if instructions are not followed.

DANGER

Indicates where *SERIOUS* injury or death *WILL* result if instructions are not followed.

- Always wear proper safety glasses, goggles, or a face shield when operating.
- **DO NOT** operate this unit without a shatter resistant cab enclosure installed on your skid-steer / compact track loader; this unit will cause flying debris.
- Block off work area from bystanders, livestock, etc.
- Bystanders must keep a distance of 300ft/100m from the unit when operating.

CONTINUED ON NEXT PAGE

- Knives are always sharp and can cause injury, even when not in motion.
- **DO NOT** use extremities to dislodge debris from the blades or disc.
- Operate only from the operator's station.
- Hydraulic fluid is hot and will heat any exposed steel, hoses, motor, or spindle in its proximity.
- Route hoses correctly to ensure a full range in motion.
- Make certain hoses are out of the way of tires, tracks or the ground.
- Be certain the disc has come to a complete stop before exiting the cab.

STOWED POSITION

When transporting Diamond's Rotary Mower between operations, make sure to protect it from collisions and accidental damages by placing it in the stowed position.

Failure to place the head in its stowed position could result in structural damage.

DANGER

Contact with the disc and knives while the disc is in motion will cause serious injury or death. The disc spins at a very high speed and can take several minutes to stop. Be sure all personnel are clear of the machine before engaging the Rotary Mower.

CONTINUED ON NEXT PAGE

OPERATING TECHNIQUES

GRASS & BRUSH CUT

Use to cut grass or brush.

- 1** Lower the front of the deck slightly to ensure that there is ample room for exhausted material to be dispersed.
 - If you hear the blades, or engine slow down, lift up the head and/or slow your ground speed.

- 2** A second pass may be needed for heavy brush or grass.
 - Complete the initial pass at 12" (305mm) into the material.
 - Complete a second pass at ground level to thoroughly mulch the remaining material.

CONTINUED ON NEXT PAGE

OPERATING TECHNIQUES

FINISHED MOW

Use for a finished look.

- Drive straight into the material keeping the deck low and level, or slightly pitched forward.
- Maintain speed of the disc and ground speed.

CONTINUED ON NEXT PAGE

OPERATING TECHNIQUES

TREE CUT

Use to cut tree without mulching.

- On large trees, start working at the top and cut the tree in 12" (305mm) increments.
- With the Rotary Mower lifted slightly, drive straight into the material.
- Use the push bar to push the tree over while cutting.
- Use a smooth, quick action to cut the material completely.
 - **NOTE:** Never drop the mower straight down on trees. Severe damage will incur. **NO PANCAKING!**

CONTINUED ON NEXT PAGE

OPERATING TECHNIQUES

NO PANCAKING

DO NOT pancake.

- This machine is not built to drop on top of material for cutting or mulching. Damage will incur to the blades and spindle as a result of driving down (pancaking) on top of the material.

NOTICE

Dropping the mower straight down (pancaking) on heavy vegetation can cause severe damage to the disc and spindle.

CONTINUED ON NEXT PAGE

OPERATING TECHNIQUES

CLEANING & RE-PROCESSING

Use to clean up branches and large debris. Re-processing the debris will provide a groomed finish.

- Raise lift arms about 6" (152mm) and drop front of head toward the ground for the leading edge to skim the ground.
- Back over the remaining debris for a more finished look.

CONTINUED ON NEXT PAGE

OPERATING TECHNIQUES

STUMP CUT

Use to cut stumps at, or below ground level.

- Keeping the deck level, cut the stump low to the ground.
- Wait to rebuild speed before proceeding with a stump cut.
- Lift up the deck and point the nose down to the ground to allow the blades to be closer to the ground.
- Drive over the stump again, cutting at or below ground level.

For more tips, visit us online at www.DiamondMowers.com

MAINTENANCE INTERVALS

Regular maintenance will make certain your unit stays productive and retains a long, operating life. The following chart represents the minimum intervals recommended for inspection and maintenance.

PROCEDURE	10 HOURS/ DAILY	50 HOURS/ WEEKLY	500 HOURS/ ANNUALLY	AS NEEDED
Blades	Inspect			
Castle Nuts/Roll Pins	Inspect			
Chain Curtain		Inspect		
Disc	Inspect			
Hydraulic Hoses & Fittings	Inspect			
Motor Bolts	Inspect			
Push Bar				Inspect
QD Couplers				Inspect
Shatter Resistant Enclosure	Inspect			Clean
Skid Shoes		Inspect		
Spindle	Inspect		Change Oil	
Spindle Bolts	Inspect			

When replacing parts, use Genuine Diamond Parts. Guaranteed to ship within 72-hours of your order being placed, or the parts and shipping are free.

Call: 888-960-0361 or 605.977.3300 | **Email:** parts@diamondmowers.com

Order online: www.diamondmowers.com

CONTINUED ON NEXT PAGE

BLADES

- Blades should be inspected every 10 hours or daily.
- Inspect the blades for any cracks or damage.
- Blades that show 50% wear from original width should be replaced. Blades should be replaced as a set of three to maintain balance.

To replace a blade:

- Remove the roll pin, castle nut, and blade bolt.
- Replace the blade.
- Using new hardware, torque castle nuts to 400ft-lbs (543Nm). **DO NOT** use Loctite.
- Refer to **CASTLE NUT & ROLL PIN** for installation specifications.

CASTLE NUT & ROLL PIN

- Castle nuts and roll pins (1) should be inspected every 10 hours or daily.
- Access to castle nuts can be reached from the front of the deck, or through the deck's access cover (2).

If a roll pin is missing:

- Torque castle nut to 400ft-lbs (543Nm).
- Replace the roll pin.
- If the roll pin cannot be inserted after the castle nut has been torqued, continue to torque the castle nut until the roll pin will fit.

CONTINUED ON NEXT PAGE

CHAIN GUARD

The chain guard is *OPTIONAL*, and may not be present on your model.

- Chain guard hardware should be inspected every 50 hours or weekly.
- The chain guard, its steel cables, and its cable clamps should be inspected every 50 hours or weekly.
- Replace as necessary.

DISC

- Disc should be inspected every 10 hours or daily.
- Raise and secure the deck to inspect the disc for any cracks or other damage. If damage is found, disc should be replaced.

If disc bolts are loose:

- Remove the bolts.
- Apply Loctite 262 (red) to the threads.
- Replace the bolts and torque to 212ft-lbs (287Nm).

CONTINUED ON NEXT PAGE

HYDRAULIC HOSES & FITTINGS

- Hydraulic hoses and fittings should be inspected every 10 hours or daily.

What to look for:

- Hydraulic fitting clamps and threaded connections for any hydraulic fluid.
 - If any leaks are observed, stop immediately to prevent damage to your machine.
- Hoses for any abrasions or cuts. Replace damaged or worn hoses.
- Attach hose wrap around critical points where hoses are likely pinched or rubbed.

CAUTION

DO NOT check for hydraulic leaks with your hands or any part of your body. Use a heavy piece of paper or cardboard to check areas that are not readily visible. Pressurized hydraulic fluid can penetrate the skin and lead to serious health risks.

MOTOR BOLTS

- Motor bolts ^(D) should be inspected every 10 hours or daily.
- Torque hardware to 110ft-lbs (149Nm).
- Verify that locking tabs are in place.
- Assemble locking tabs to the U-shaped tab over the cab bolts with their hardware. Torque hardware to 75in-lbs (8.5Nm).

CONTINUED ON NEXT PAGE

PUSH BAR

- Check for cracks.
- Repair as necessary.

QD COUPLERS

- Inspect connections for leaks, damage, etc.
- Replace as necessary.

SHATTER RESISTANT ENCLOSURE

- **REQUIRED!** Debris can be thrown unexpectedly in any direction. Do not attempt to use this unit without proper protection.
- Clean only with mild soap and water using a sponge or soft cloth.
- Inspect every 10 hours or daily. Replace as necessary.

SKID SHOES

- Skid shoes should be inspected every 50 hours or weekly.
- Replace as necessary.

CONTINUED ON NEXT PAGE

SPINDLE

- Inspect topside of the cutting disc for oil.
 - If oil is present, the spindle's lower bearing seal may be damaged and will require replacement.
- The disc should rotate smoothly.
 - If excessive play is found, the spindle bearings are likely worn and will require replacement.
- Drain and replace oil annually or every 500 hours with 32oz of 75w90 synthetic gear oil.
 - Remove motor shield, drain plug (1) facing forwards, and fill plug (2) on opposite side facing operator.
 - Tilt head down/forward over oil catch pan until all oil stops draining, then replace drain plug.
 - Fill spindle with oil, then replace fill plug.
- Keep the pressure relief area (3) free of debris every 10 hours or daily.
 - **NOTE:** Oil leaking while operating indicates a motor seal failure.

SPINDLE BOLTS

- Spindle bolts and nuts (4) must be inspected every 10 hours or daily.
- If bolts come loose, remove, apply Loctite 262 (red) to threads and reinstall.
- Torque hardware to 212ft-lbs (287Nm).

NOTICE

Failure to inspect and replace hardware at recommended intervals will cause damage to the Machine and Skid-Steer / Compact Track Loader.

TROUBLESHOOTING

PROBLEMS	POTENTIAL CAUSE	SOLUTION
Disc Will Not Spin	No hydraulic flow from skid steer / compact track loader	Verify hydraulic flow from power unit.
	Failed splined insert	Replace splined insert. <ul style="list-style-type: none"> ● Remove motor from spindle. ● Remove the spindle cover. ● Thread a 3/4-16 by 3" bolt into the insert base, forcing it out of the spindle. ● Replace spindle insert. ● Replace spindle cover. Torque spindle cover hardware to 45ft-lbs (61Nm). ● Replace motor and torque hardware to 110ft-lbs (149Nm). ● Replace lock tab hardware and torque to 75in-lbs (8.5Nm).
	Reversed flow from skid loader	After connecting the hoses to the machine, start machine at low idle and verify that the disc is spinning clockwise.
	Hydraulic motor shaft failure	Will require replacement. Contact Diamond Parts at 888.960.0361 or 605.977.3300.
	Material jammed	Dislodge material from disc by first disengaging the implement and backing up. This will typically clear the cutting head. If the cutting head does not clear, shut down the implement and rest the head on the ground. Clear the head manually. <ul style="list-style-type: none"> ● DO NOT use extremities to dislodge debris from blades or disc.

CONTINUED ON NEXT PAGE

PROBLEMS	POTENTIAL CAUSE	SOLUTION
Excessive Vibration	Disc to spindle hardware is loose	Tighten hardware <ul style="list-style-type: none"> ● Torque hardware to 212ft-lbs (287Nm).
	Vegetation build up on disc	Clean disc to remove debris by first disengaging the implement and backing up. This will typically clear the cutting head. If the cutting head does not clear, shut down the implement and rest the head on the ground. After the disc has come to a complete stop, clear the head manually. <ul style="list-style-type: none"> ● DO NOT use extremities to dislodge debris from teeth or disc.
	Missing or broken blade	Replace blade. <ul style="list-style-type: none"> ● Remove the blade bolt. ● DO NOT use Loctite. ● Use a torque wrench set to torque to 400ft-lbs (543Nm). <ul style="list-style-type: none"> ○ If the roll pin cannot be inserted after the castle nut has been torqued, continue to torque the castle nut until the roll pin will fit.
	Excessive play in spindle	The disc should rotate smoothly <ul style="list-style-type: none"> ● If excessive play is found, the spindle bearings are likely worn and will require replacement. Contact Diamond Parts at 888.960.0361 or 605.977.3300.

PROBLEMS	POTENTIAL CAUSE	SOLUTION
Disc Slows Quickly	Skid-steer / compact track loader is operating on standard flow vs. high flow	Ensure skid steer / compact track loader is on high flow.
	Need to replace blades	Replace blade. <ul style="list-style-type: none"> ● Remove the blade bolt. ● DO NOT use Loctite. ● Use a torque wrench set to torque to 400ft-lbs (543Nm). <ul style="list-style-type: none"> ○ If the roll pin cannot be inserted after the castle nut has been torqued, continue to torque the castle nut until the roll pin will fit.

How to Determine Your Motor Part Number

60"(1524mm), 72"(1829mm), and 84"(2134mm) DECKS

NOTE: The following parts pages of drive assemblies have multiple motor options to identify which motor you have. Determine your machine GPM (LPM) hydraulic oil requirements, and follow the instructions below:

- Determine your machine hydraulic oil flow specifications in Gallons Per Minute (GPM).
- Locate the appropriate drive assemblies page for your mower size and equivalent GPM range on the following drive assembly parts pages.
- If multiple motor options are specified on the appropriate parts page, measure  the width of the gear set section of your motor in inches to determine which motor and part number on the following drive assembly parts pages is the correct replacement for your motor. Measure  the gear section shown in the illustration below.

DRIVE ASSEMBLY: 16-28 GPM (61-106 LPM)
